

Mail-In Voting and the NRA

By: Gabe Mendoza, Joao Pedro Haufes, Adeildo Vieira Silva
Neto, Aubteen Pour-Bazar
STA 199 - Spring 2023

Introduction

- Mail-in voting
- Partisan leaning and NRA
- Thompson et al.

Introducing our data

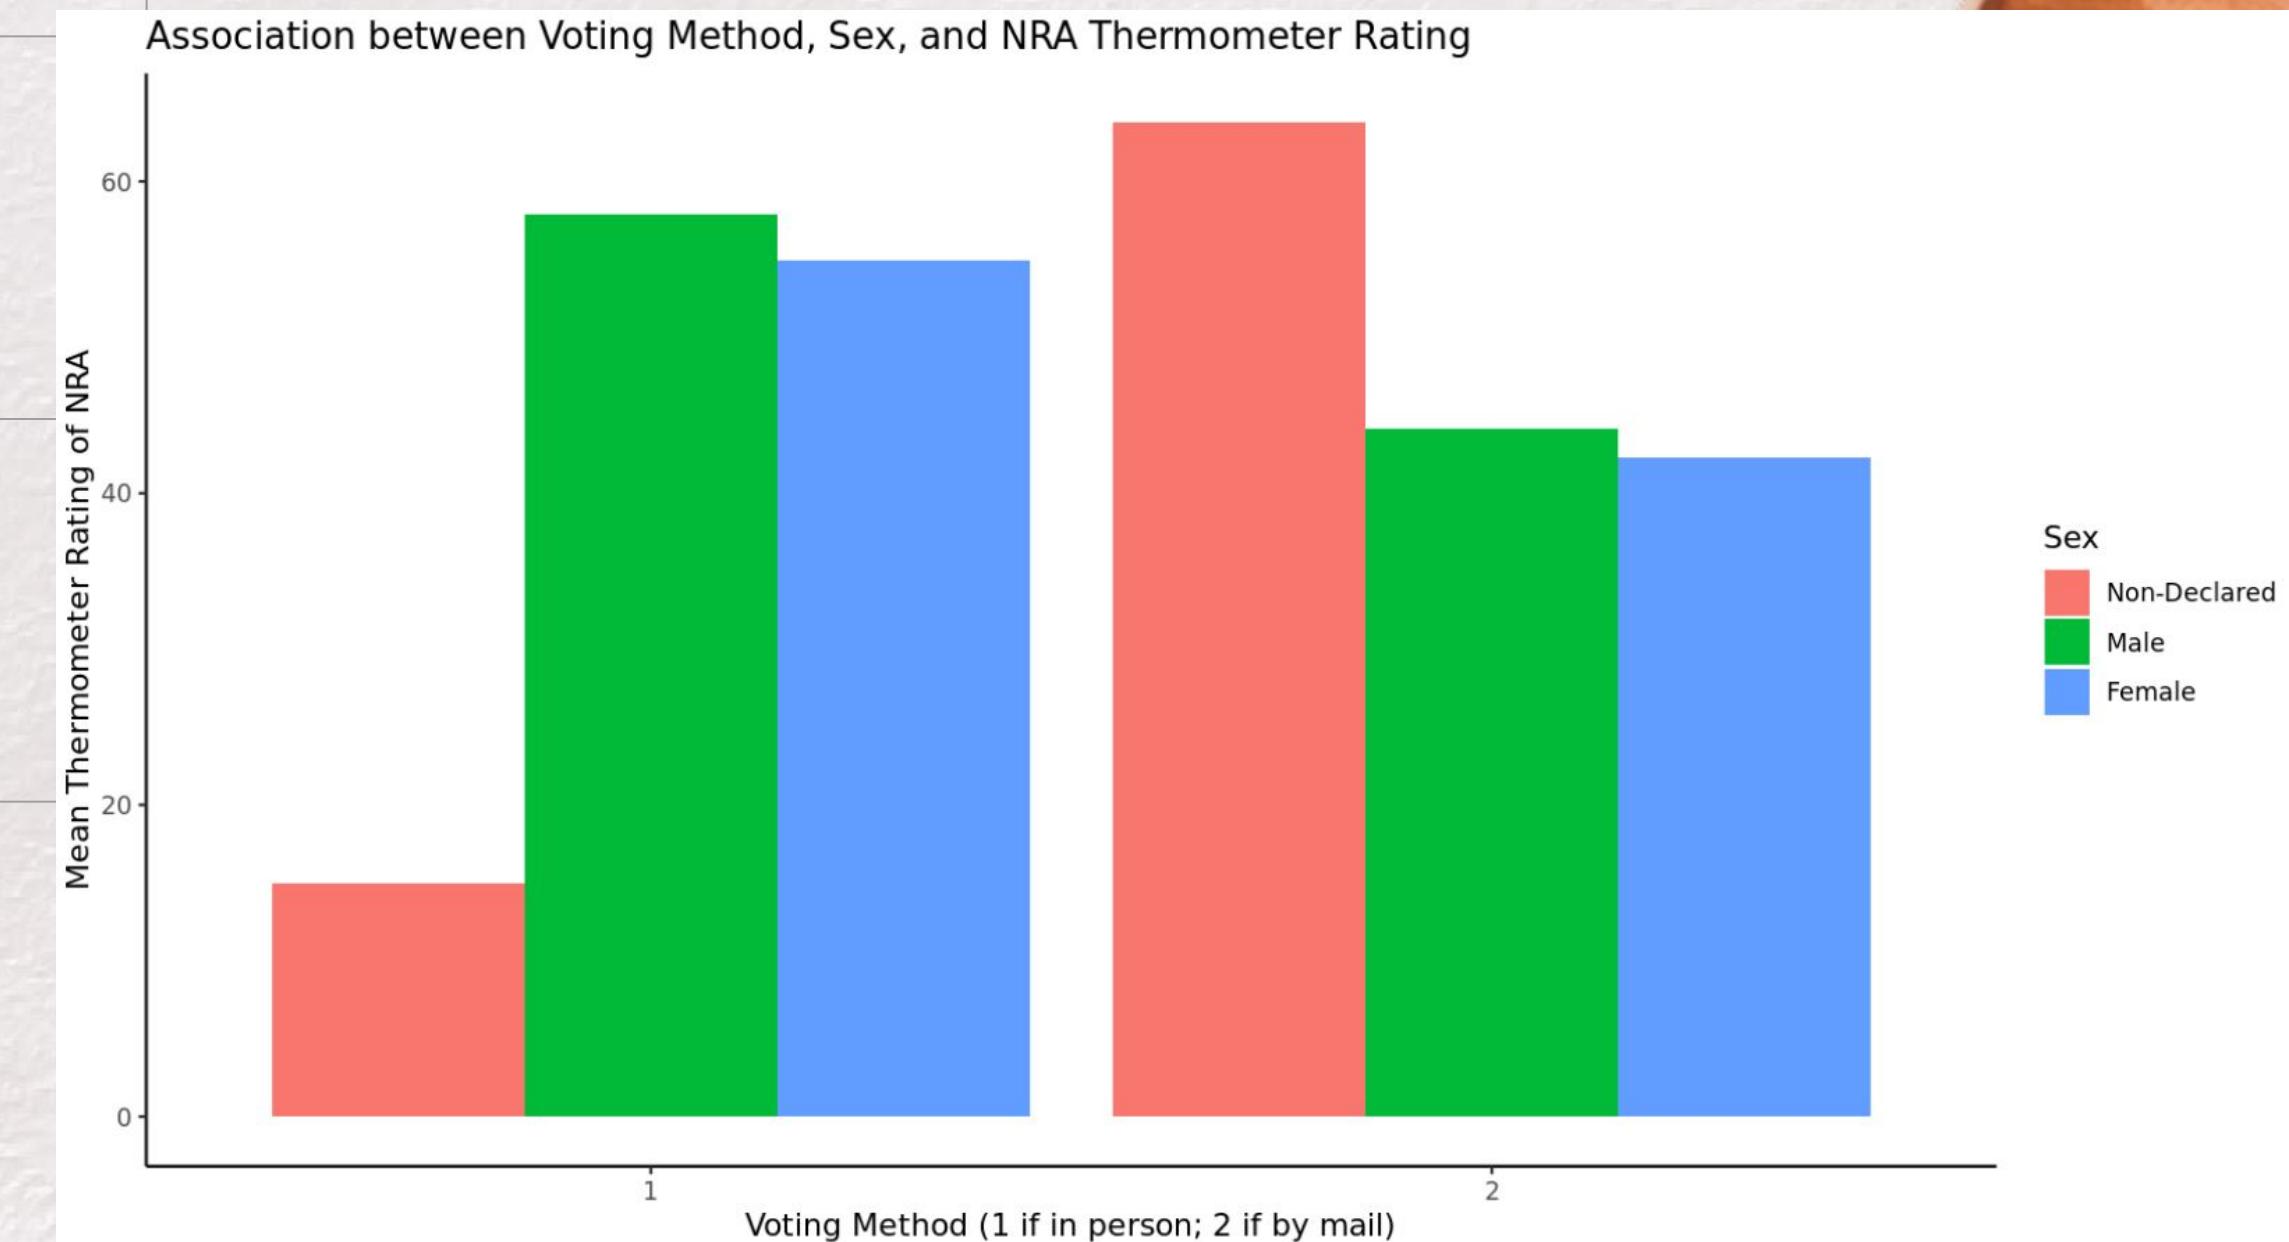

- American National Election Studies
- 8,280 interviews before the 2020 presidential election and 7,499 individuals after the election
- How does whether an individual voted by mail/absentee and their sex alignment associate with their 'thermometer' rating of the NRA?

Exploratory Data Analysis (EDA)

	Man	Woman
By Mail	44.1	42.2
In Person	57.9	54.9

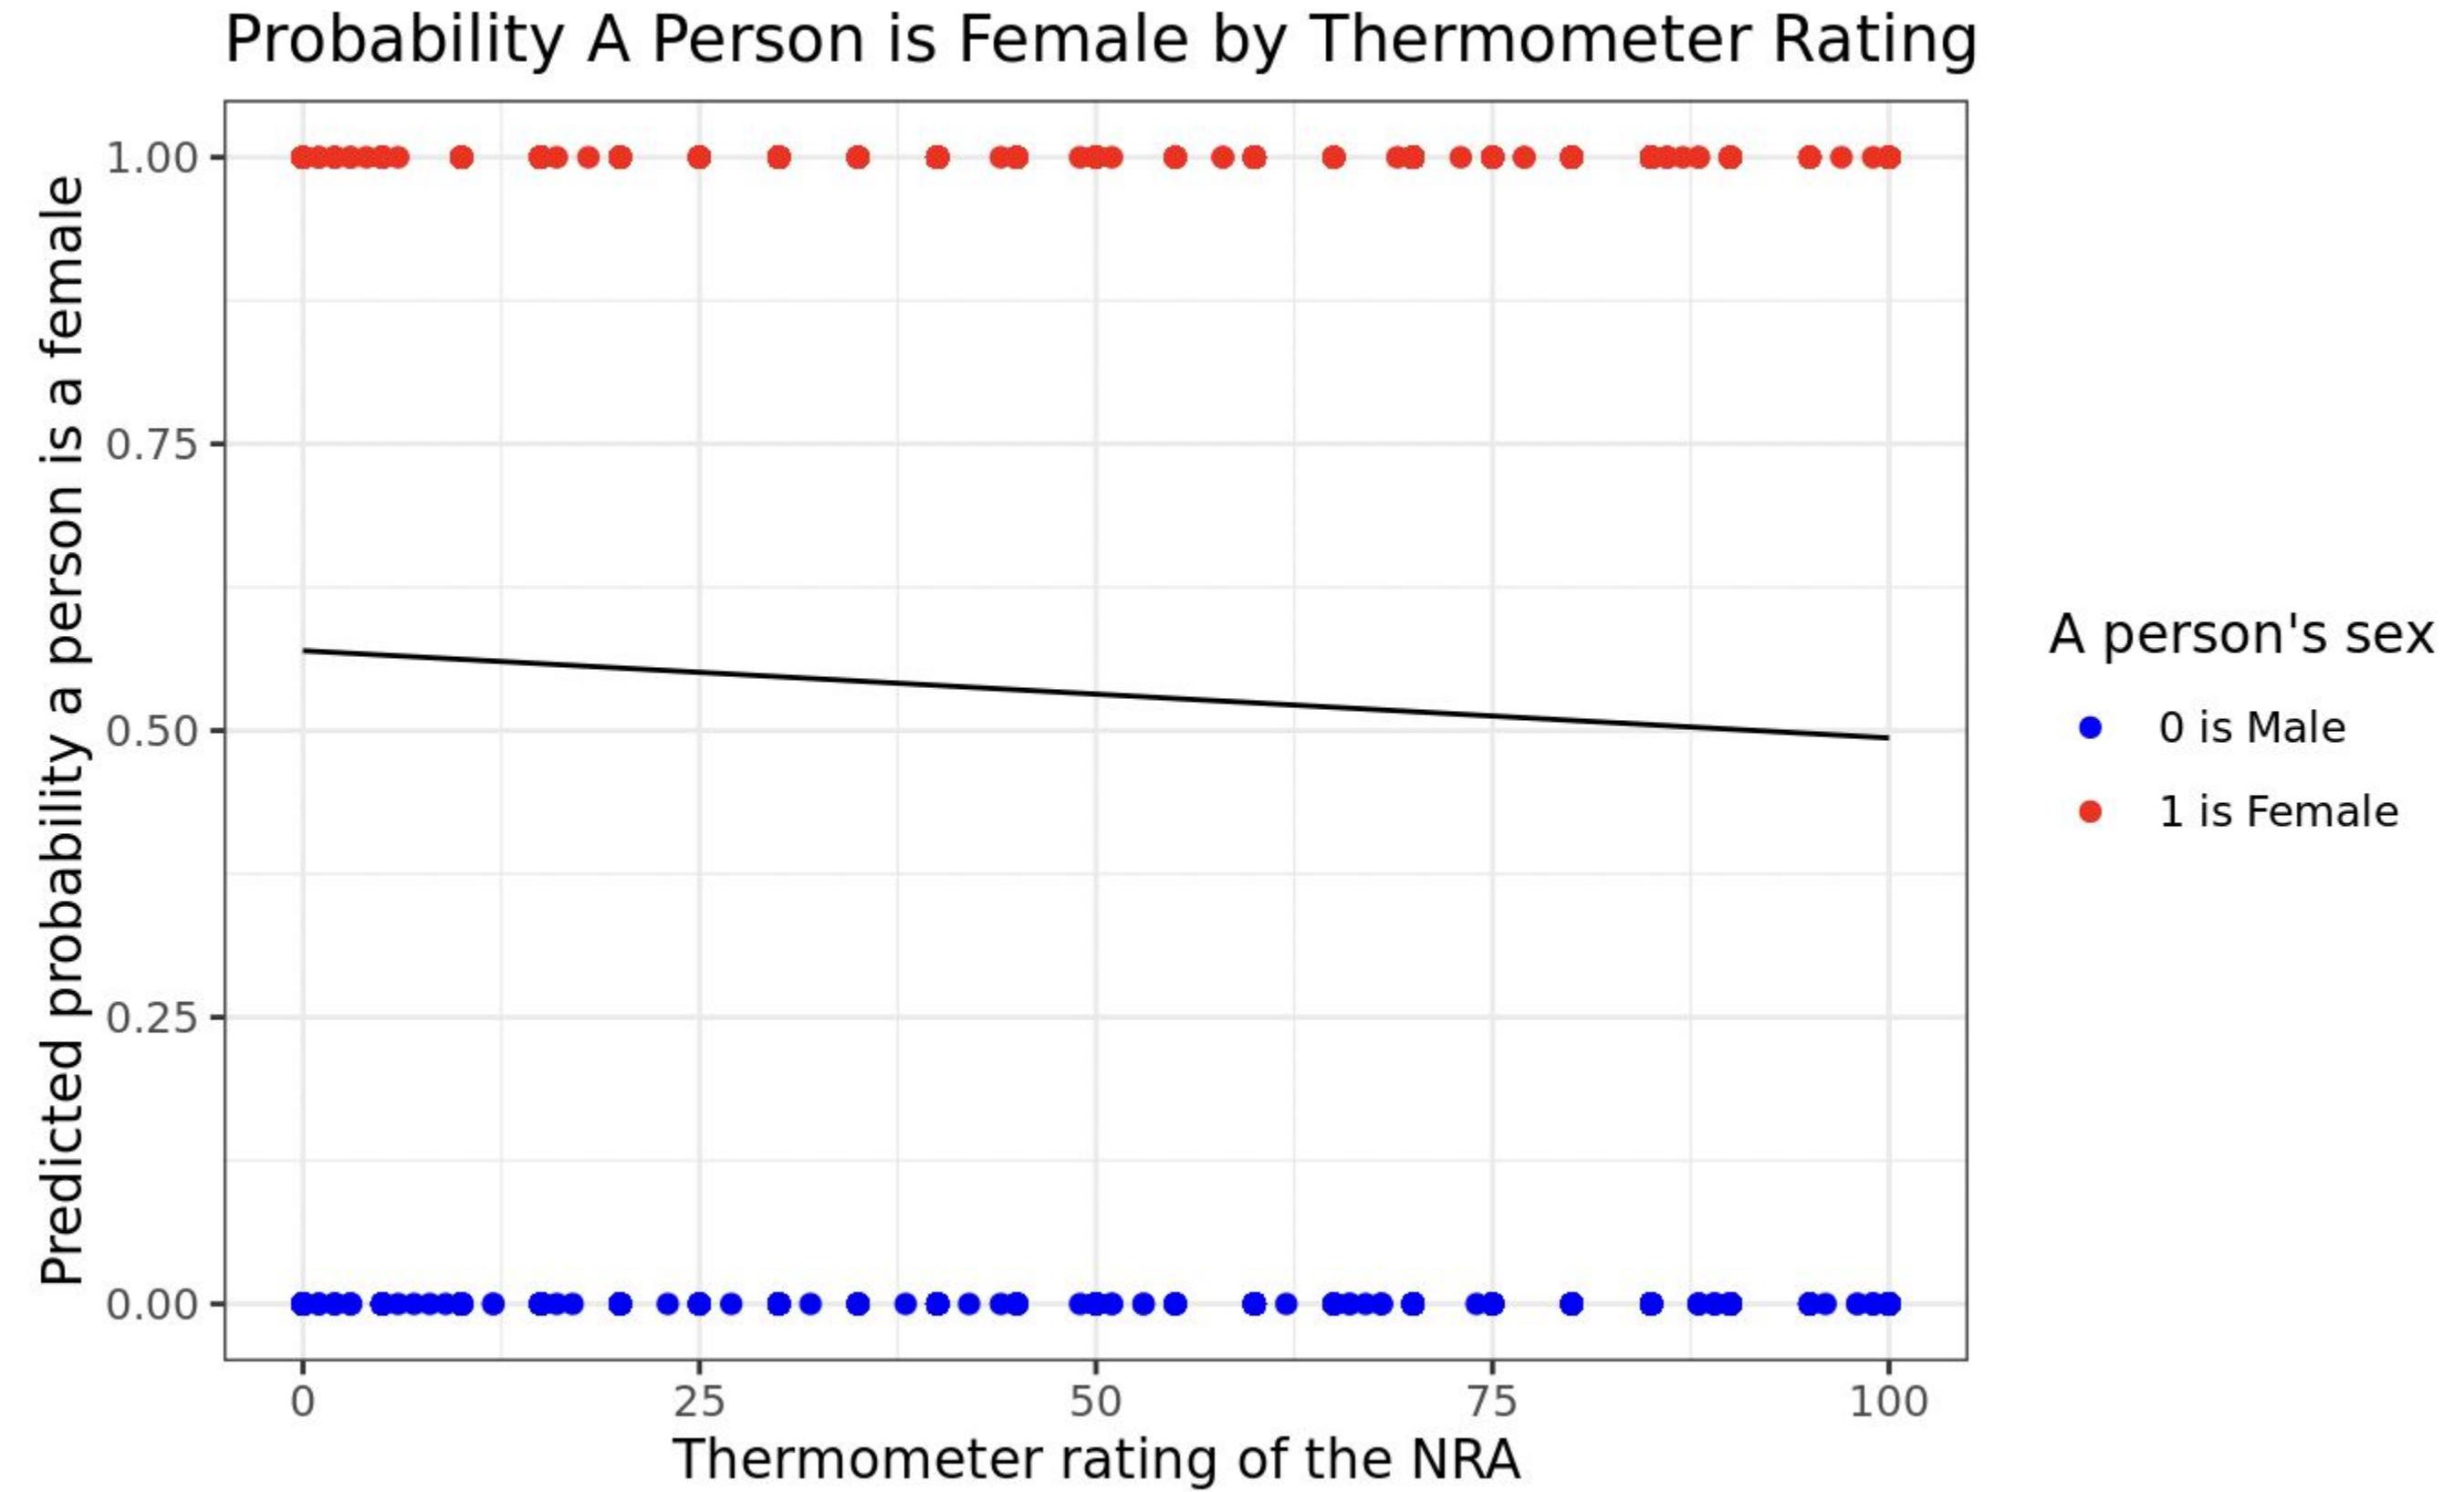

Sample Mean: 48.6

Logistic Model 1

Intercept:
- 0.5883

Slope:
- -0.004

Logistic Model 2

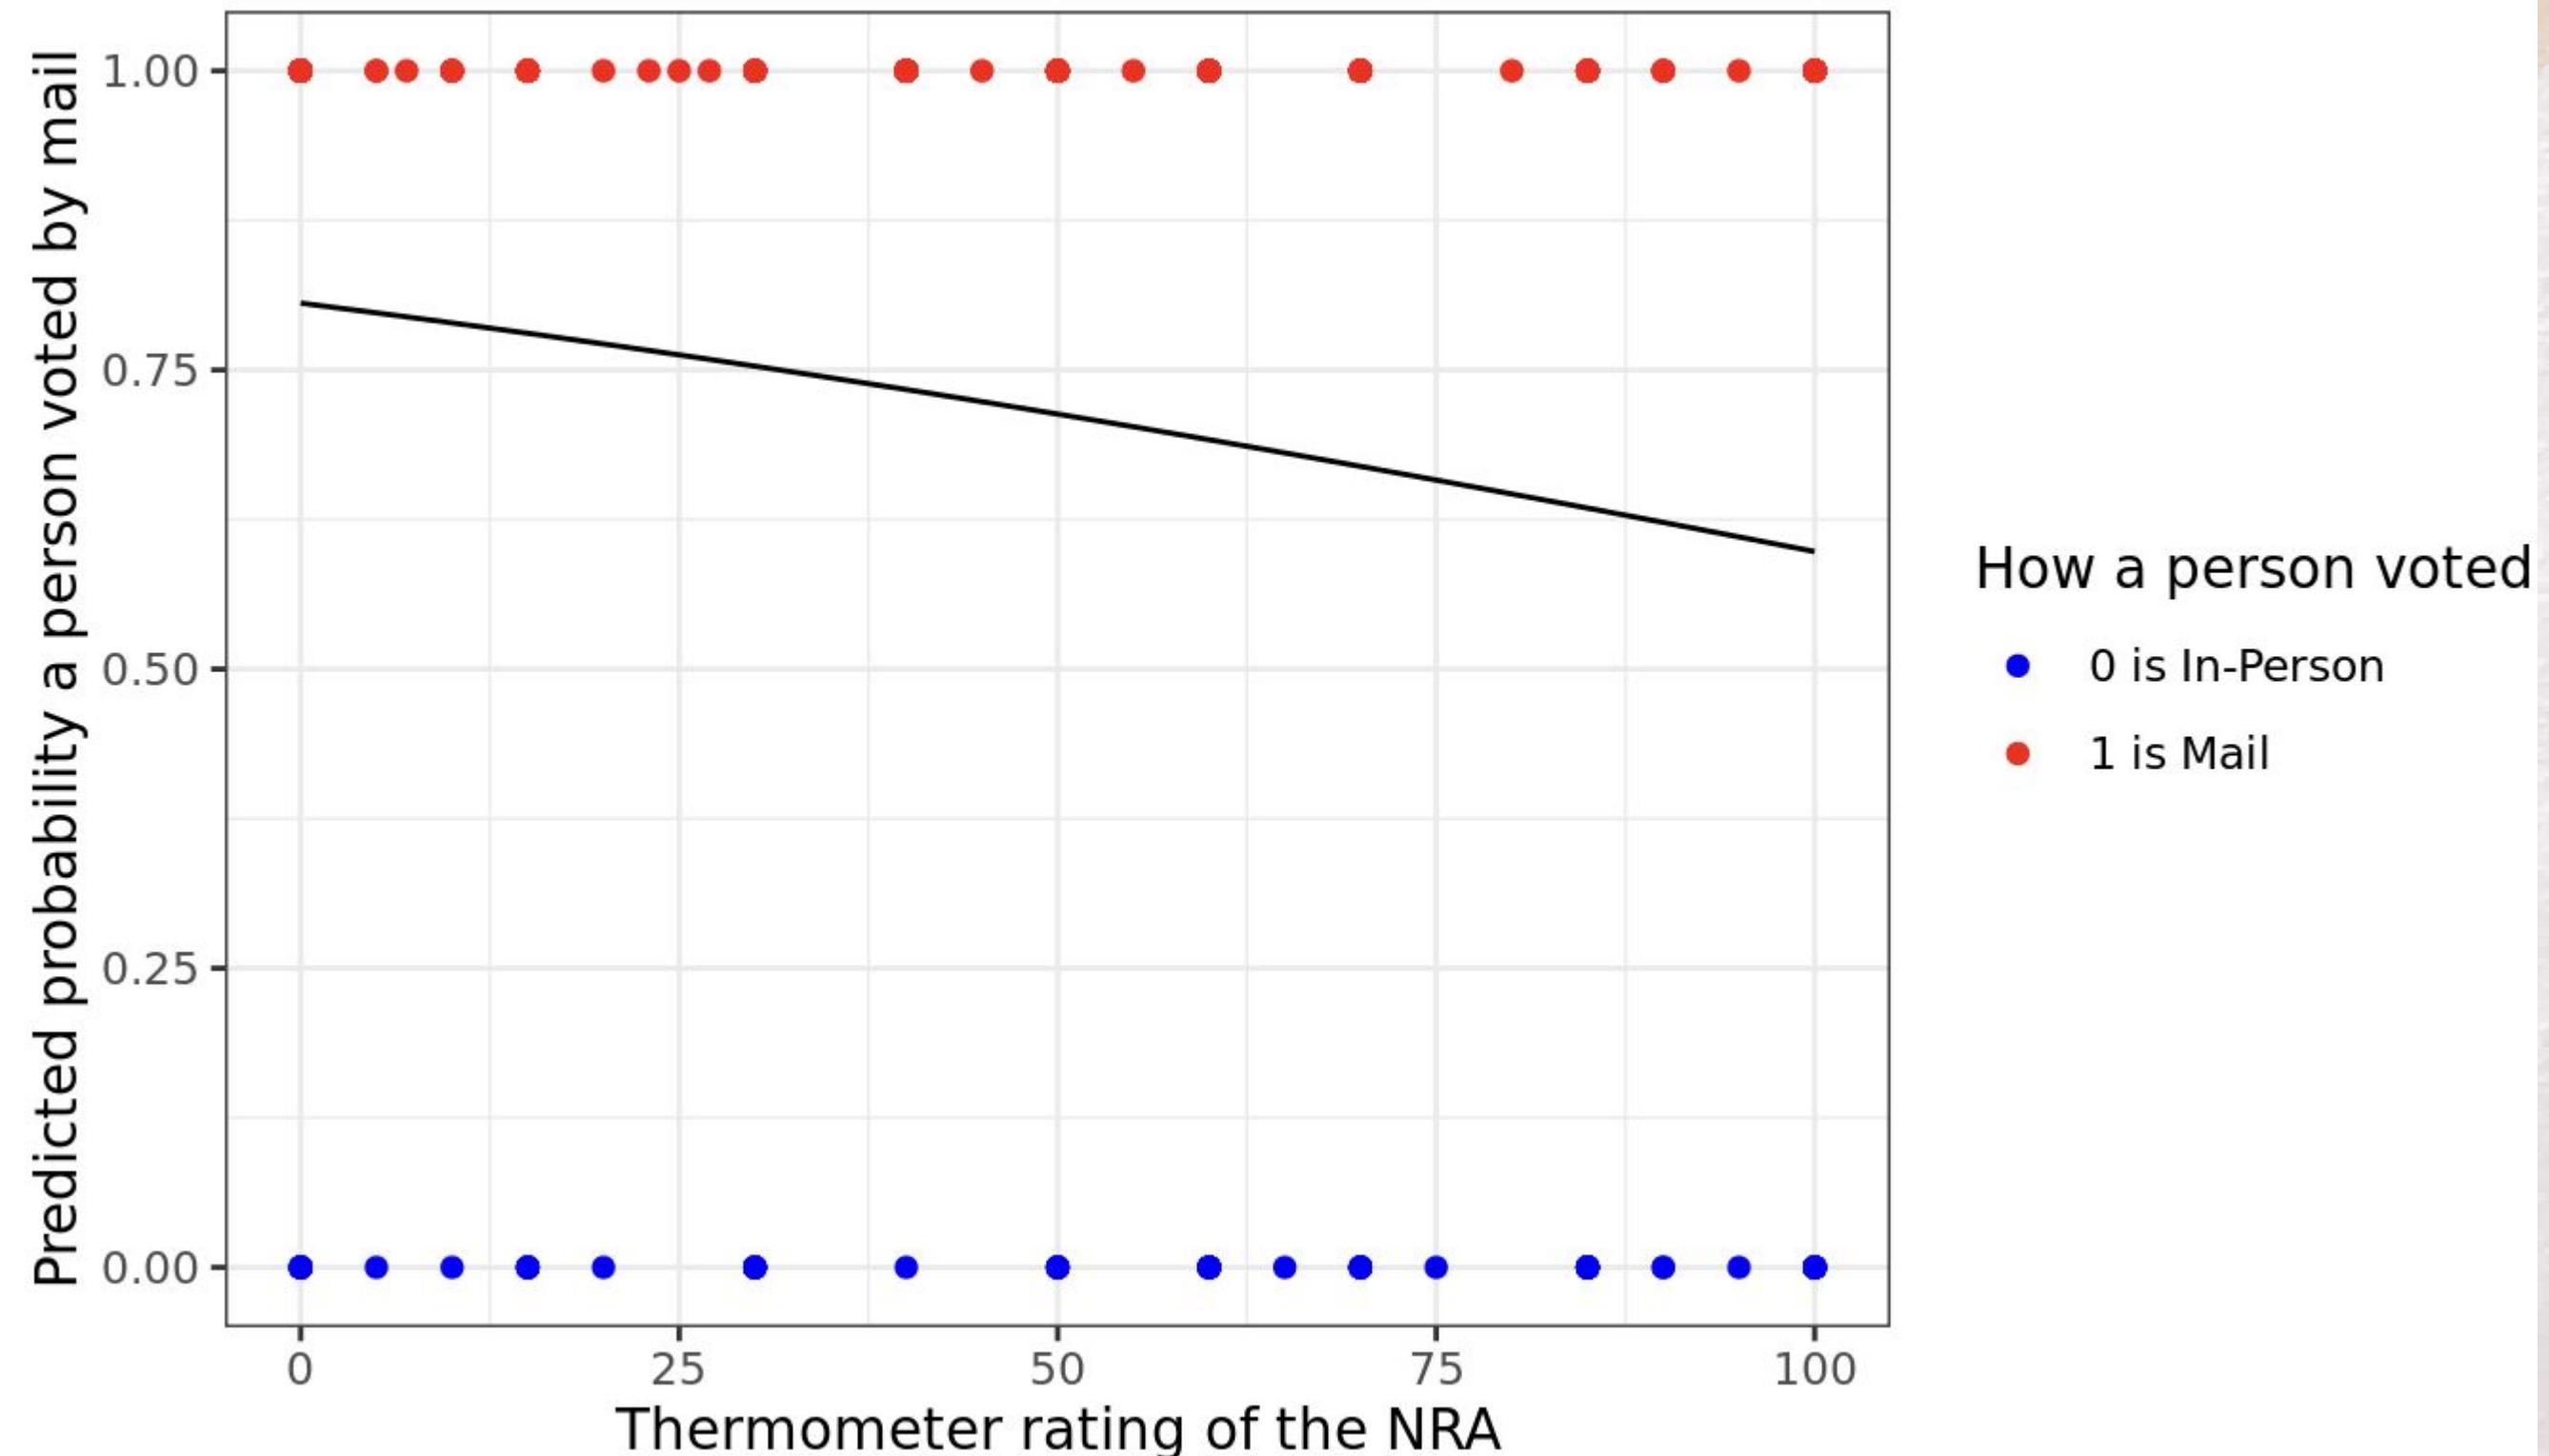

Intercept:

- 0.806

Slope:

- -0.011

Probability A Person Voted by Mail by Thermometer Rating

Conclusions/future work

- Men and voting in-person are positively associated with NRA approval.
- Women and voting by mail are negatively associated with NRA approval.
- Explore why these associations exist, such as examining demographic and geographic factors that may influence these attitudes.
- Investigate the impact of the NRA's advocacy efforts on attitudes towards gun rights and gun control.
